

LIST OF EXPERIMENTS:

Course Objective:

- To develop web applications in cloud
- To learn the design and development process involved in creating a cloud based application
- To learn to implement and use parallel programming using Hadoop

Exercises:

Install Virtualbox/VMware Workstation with different flavours of linux or windows OS on top of windows7 or

Install a C compiler in the virtual machine created using virtual box and execute Simple Programs

Install Google App Engine. Create hello world app and other simple web applications using python/java.

Use GAE launcher to launch the web

Simulate a cloud scenario using CloudSim and run a scheduling algorithm that is not present in CloudSim.

Find a procedure to transfer the files from one virtual machine to another virtual

Find a procedure to launch virtual machine using trystack (Online Openstack Demo Version)

Install Hadoop single node cluster and run simple applications like

Course Outcome:

On completion of this course, the students will be able to:

- Configure various virtualization tools such as Virtual Box, VMware
- Design and deploy a web application in a PaaS
- Learn how to simulate a cloud environment to implement new schedulers.
- Install and use a generic cloud environment that can be used as a private
- Manipulate large data sets in a parallel

TOTAL: 45 PERIODS

PROCEDURE TO INSTALL

Step 1- Download Link

Link for downloading the software is <https://www.vmware.com/products/workstation-pro/workstation-pro-evaluation.html>. Download the software for windows. Good thing is that there is no signup process. Click and download begins. Software is around 541 MB.

Step 2- Download the installer file

It should probably be in the download folder by default, if you have not changed the settings in your browser. File name should be something like VMware-workstation-full-15.5.1-15018445.exe. This file name can change depending on the version of the software currently available for download. But for now, till the next version is available, they will all be VMware Workstation 15 Pro.

Step 3- Locate the downloaded installer file

For demonstration purpose, I have placed the downloaded installer on my desktop. Find the installer on your system and double click to launch the application.

OUTPUT:

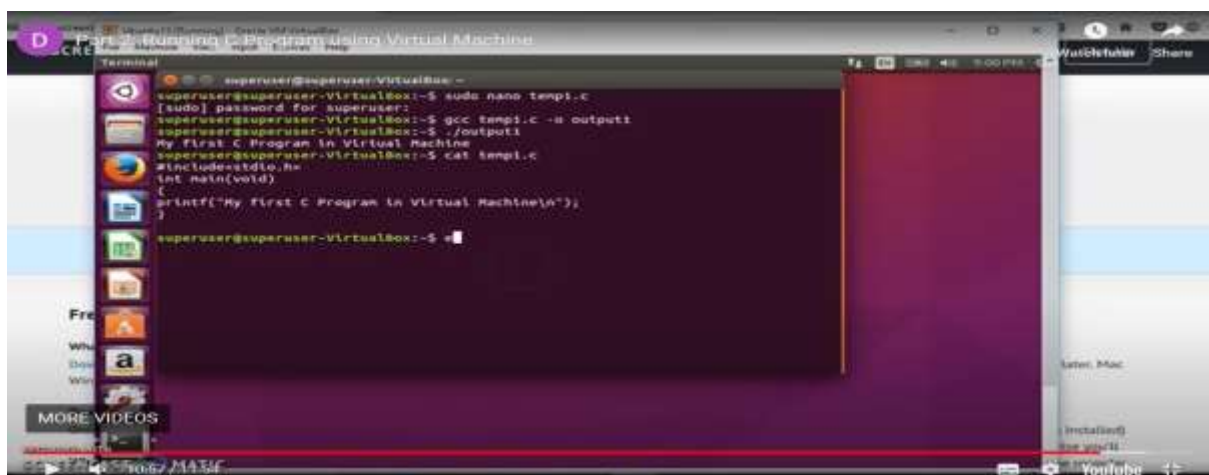

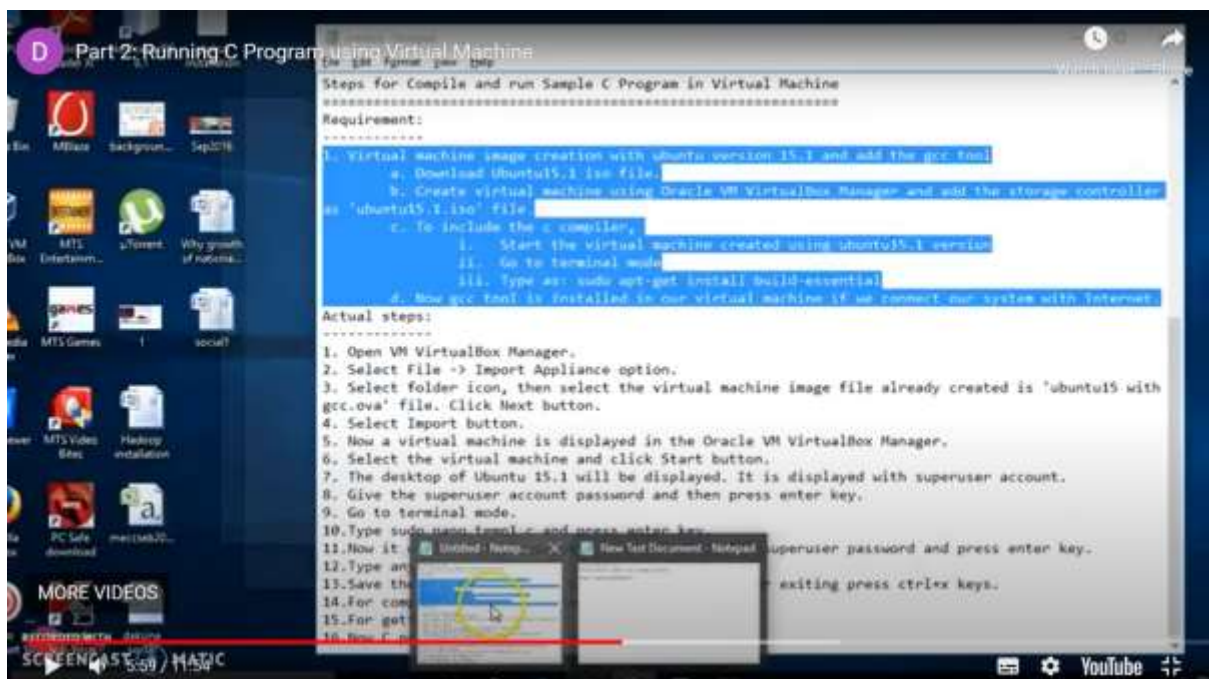

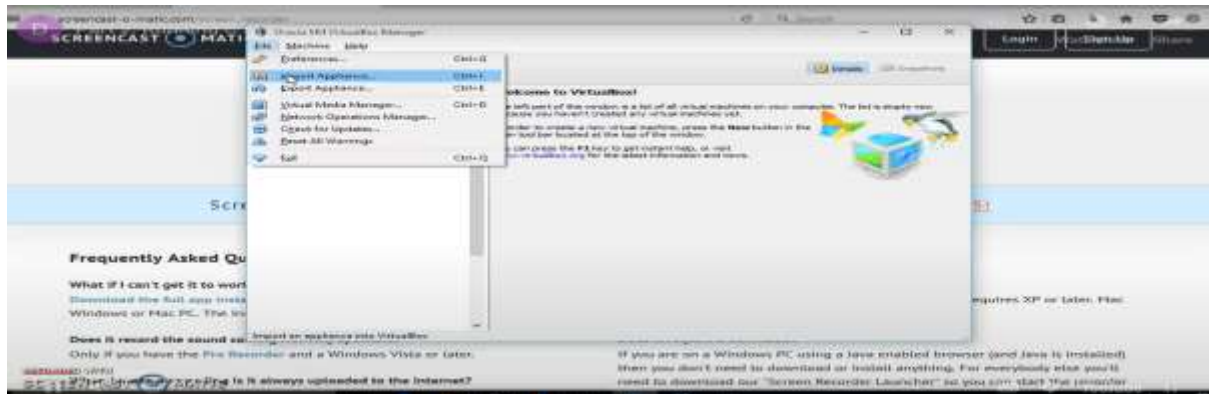

EX.No:2 Install a C compiler in the virtual machine created using virtual box
I. Visit <http://www.virtualbox.org/wiki/downloads>

Download VirtualBox platform packages for your OS
Open the Installation Package by double clicking
Click continue and finish installing VirtualBox
When finished installation, close the window
Download Linux

I. Visit the page <http://www.ubuntu.com/download/ubuntu/download>

Choose the Latest version of Ubuntu and 32-bit and click “Start Download”
OUTPUT:

EX.No:3 Install Google App Engine. Create hello world app and other simple web applications
Installing and Running the Google App Engine On Windows

This document describes the installation of the Google App Engine Software Development Kit (SDK) on a Microsoft Windows and running a simple “hello world” application.

The App Engine SDK allows you to run Google App Engine Applications on your local computer. It simulates the run---time environment of the Google App Engine infrastructure.

Pre--Requisites: Python 2.5.4

If you don't already have Python 2.5.4 installed in your computer, download and Install Python 2.5.4 from:

<http://www.python.org/download/releases/2.5.4/>

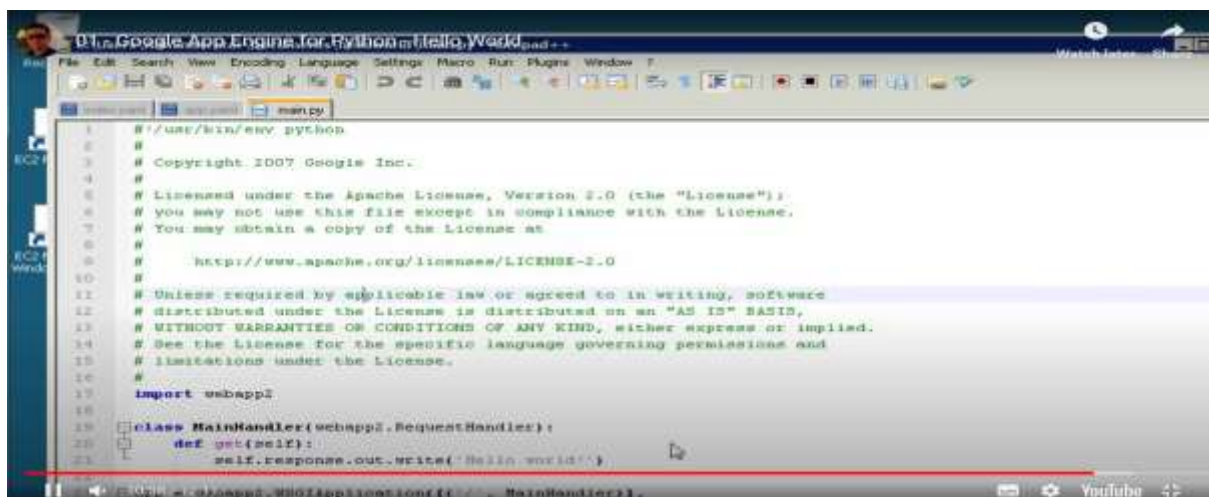

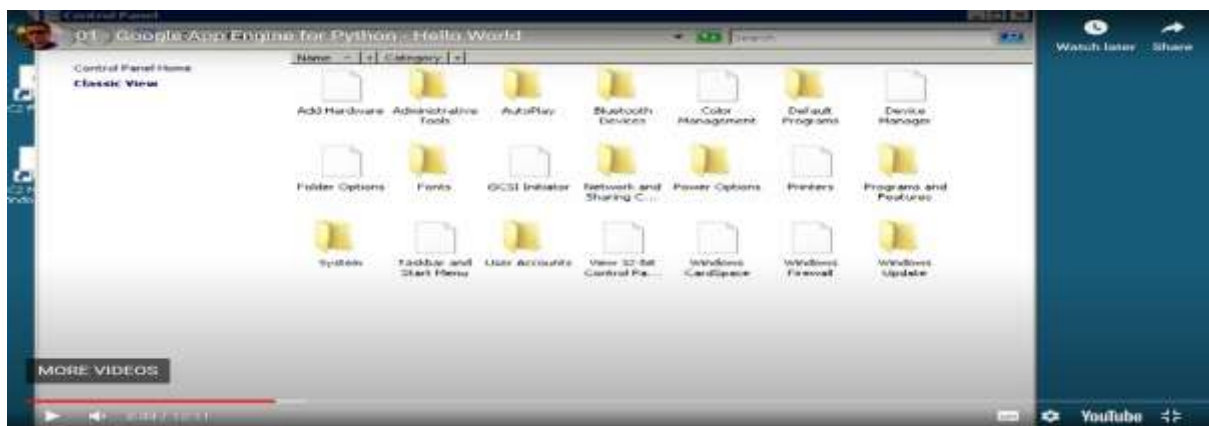

Download and Install

You can download the Google App Engine SDK by going to:

<http://code.google.com/appengine/downloads.html>

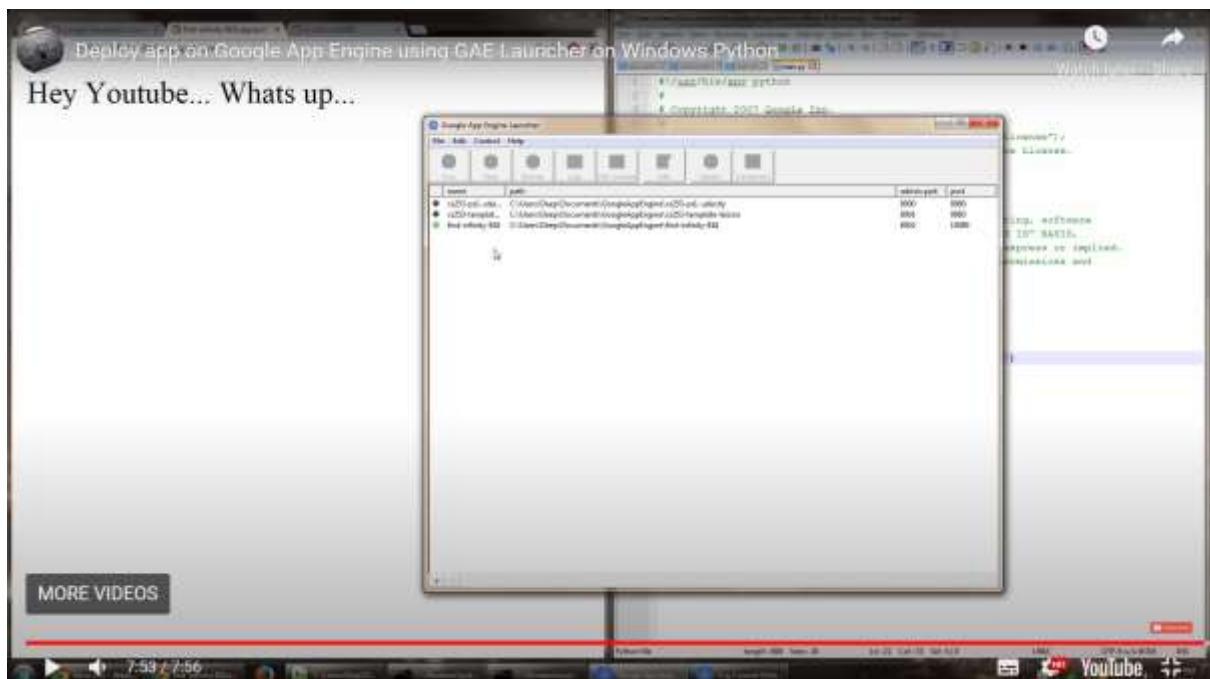

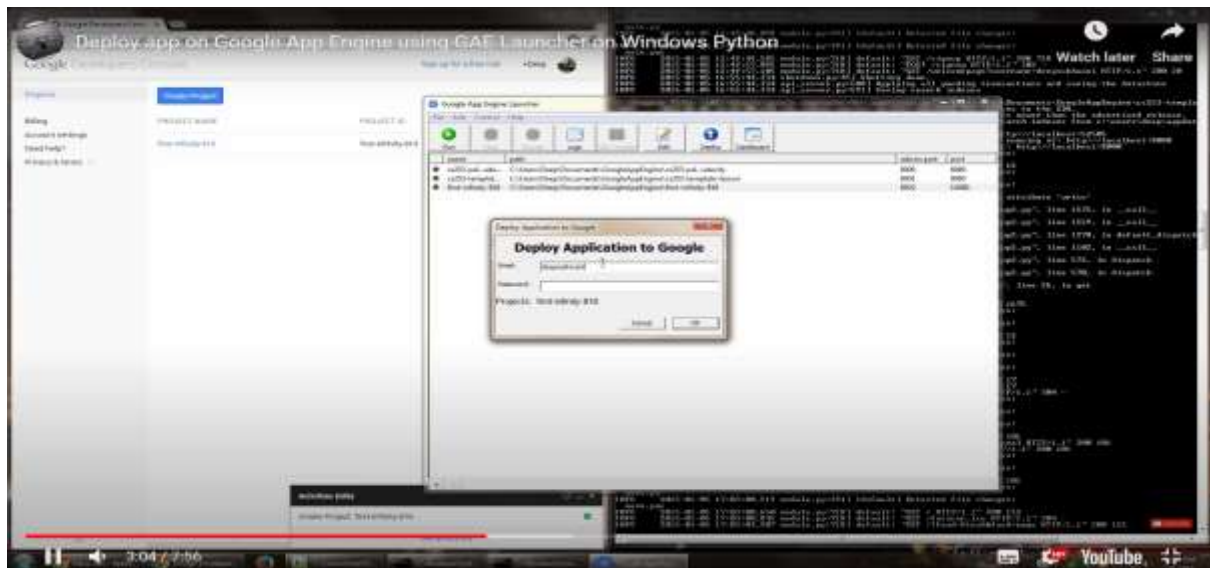

and download the appropriate install package.

OUTPUT:

Use GAE launcher to launch the web applications

Use GAE launcher to launch the web applications.

PROCEDURE:

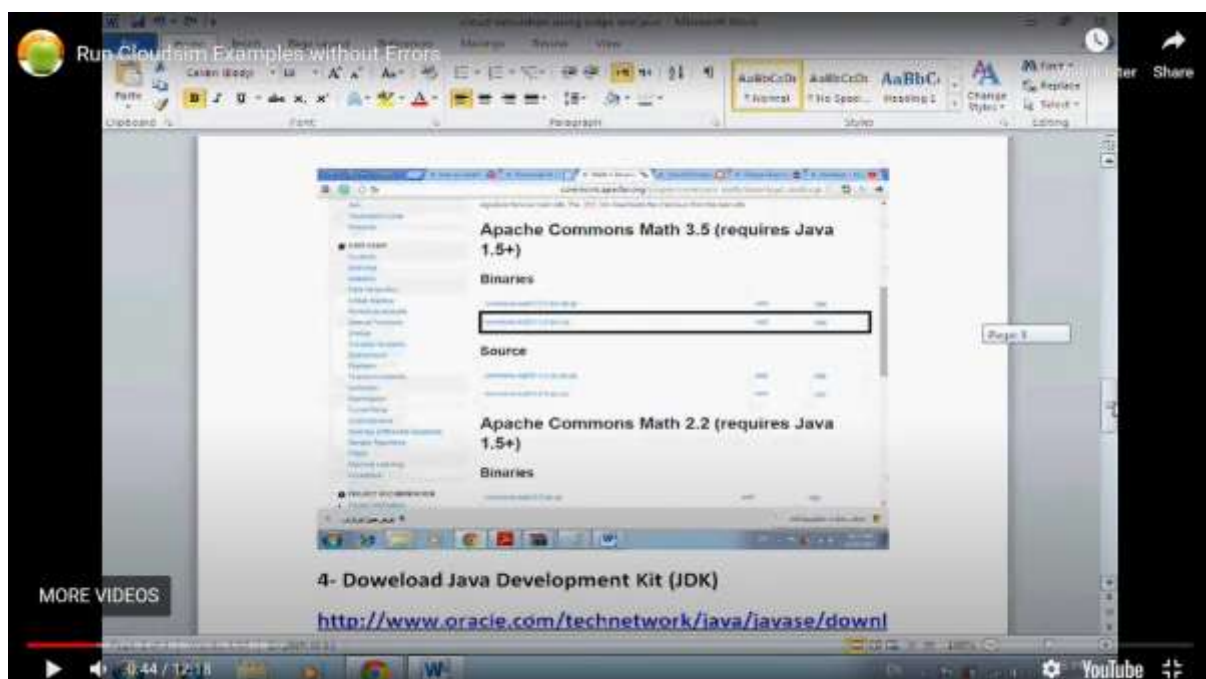

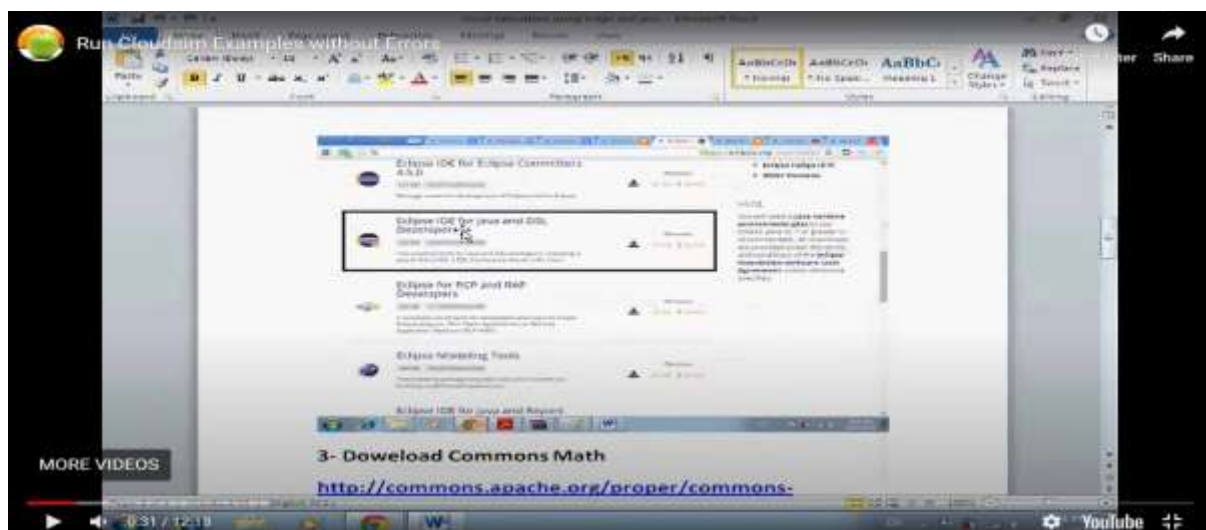

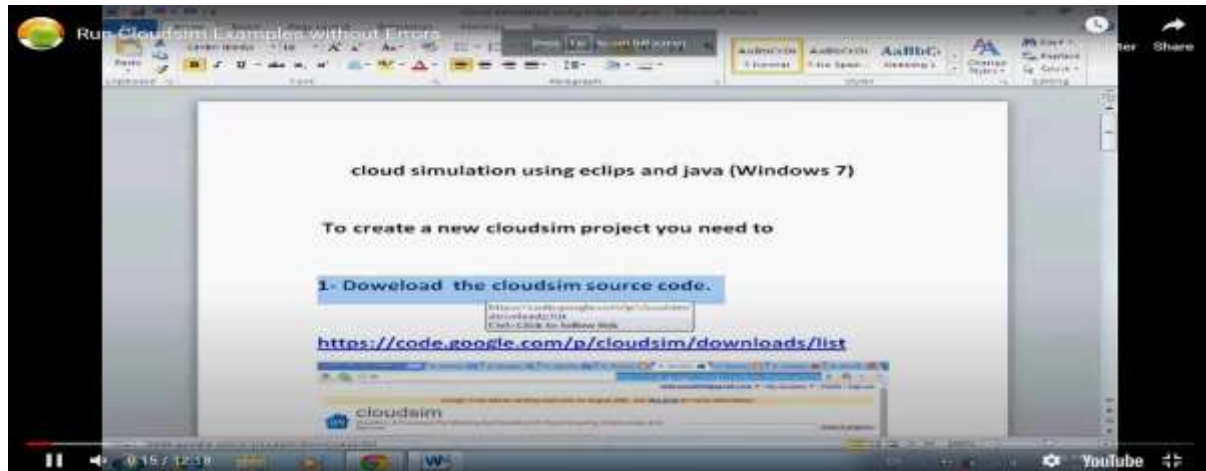

Simulate a cloud scenario using CloudSim and run a scheduling algorithm

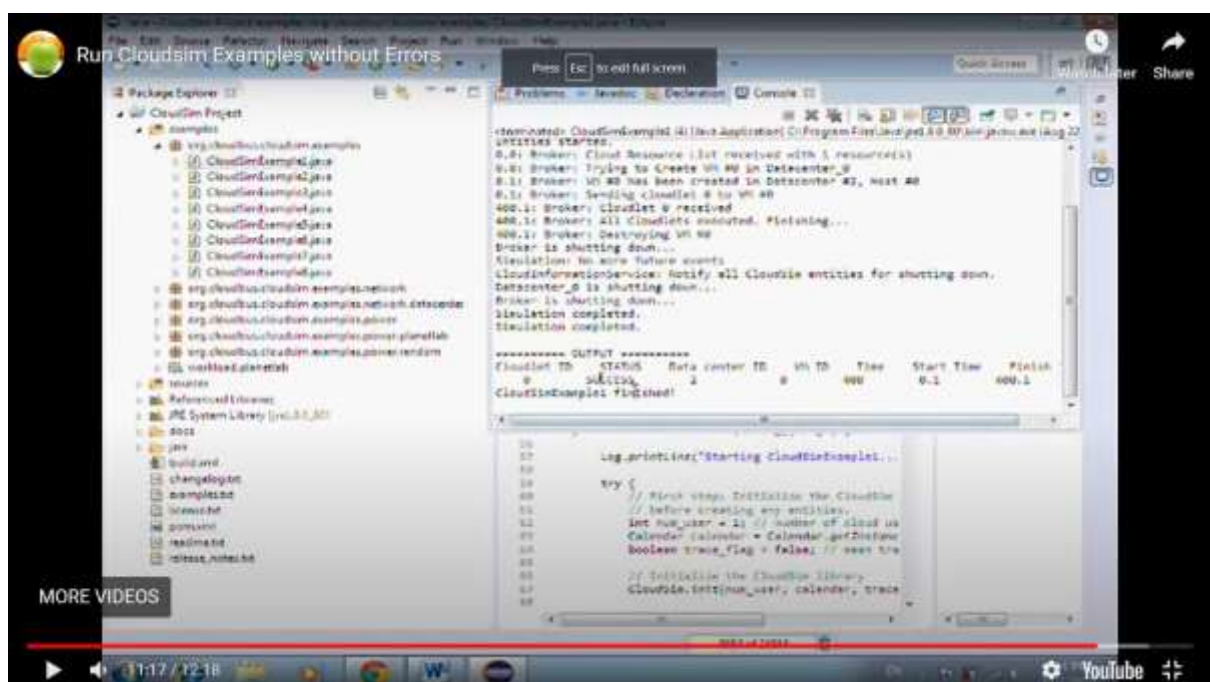

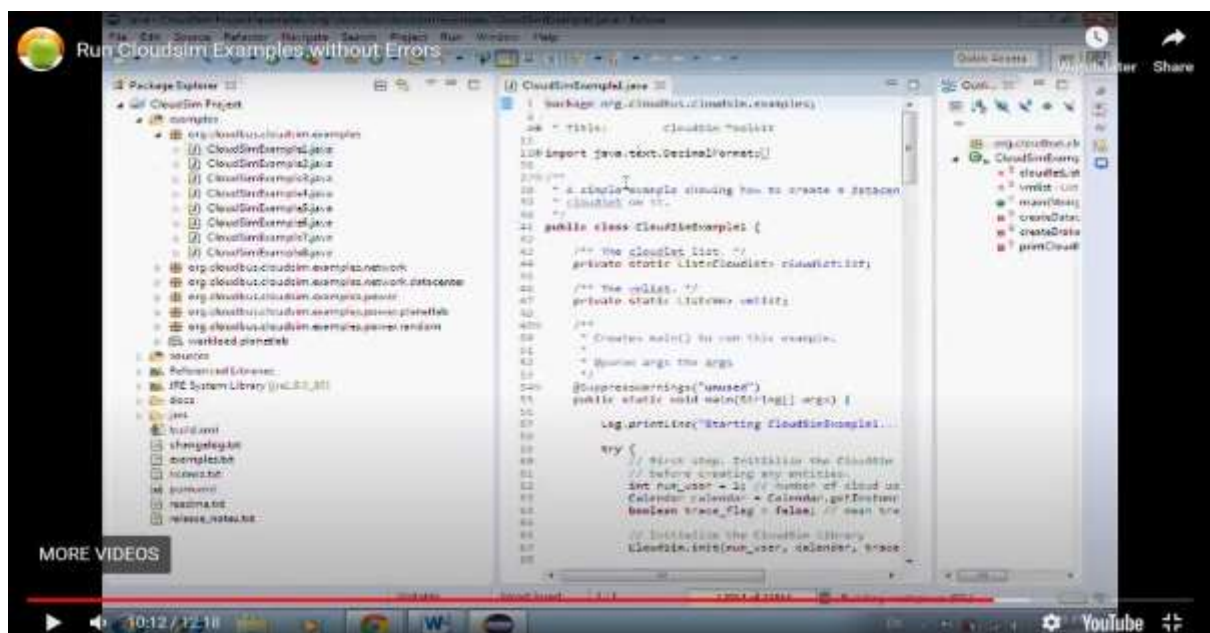

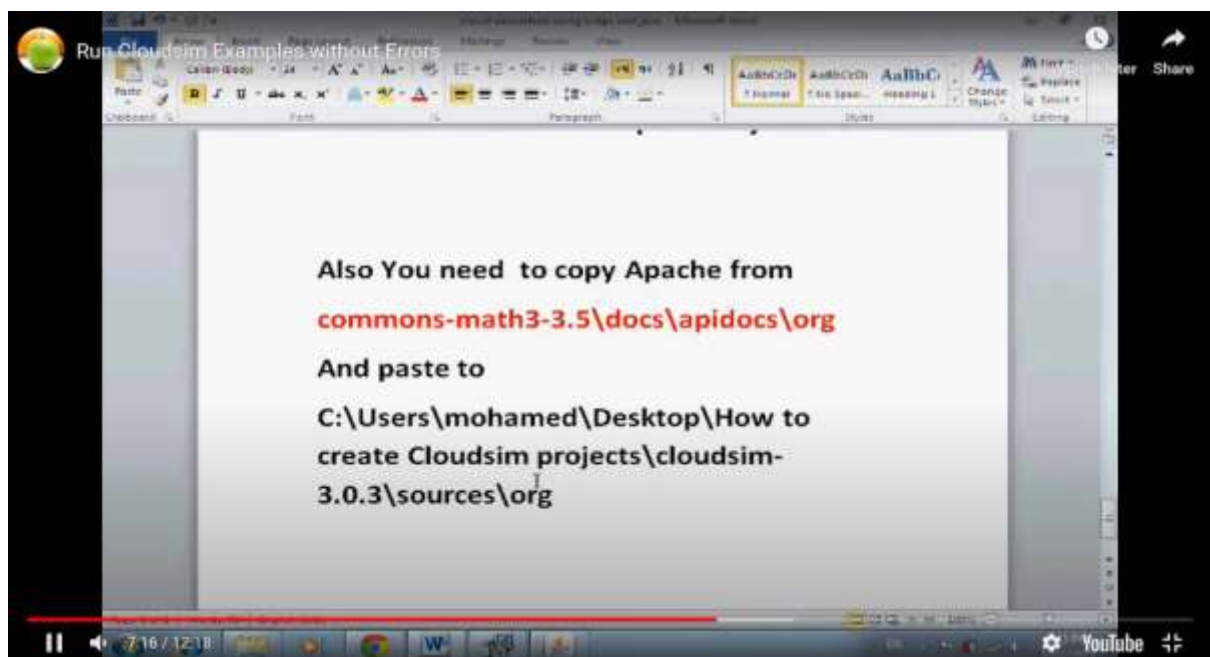

Download the cloudsim source code.

Download Eclipse

Download Common Math

Download Java Development Kit

OUTPUT:

EX.No:6

Find a procedure to transfer the files from one virtual machine to another virtual machine

PROCEDURE:

Create a folder in desktop

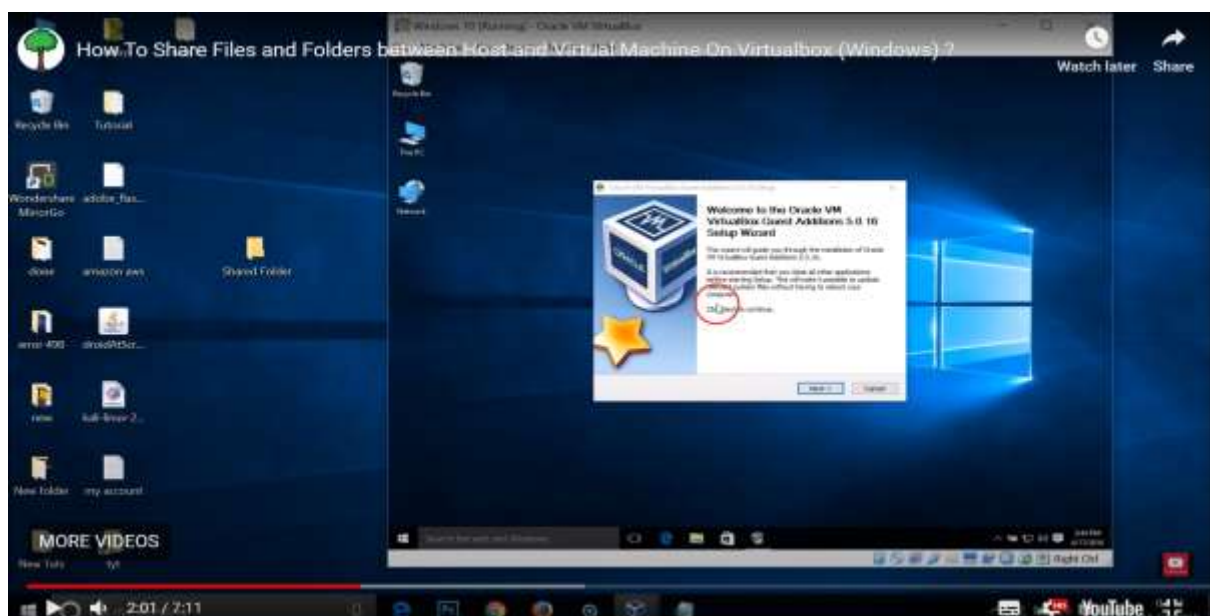

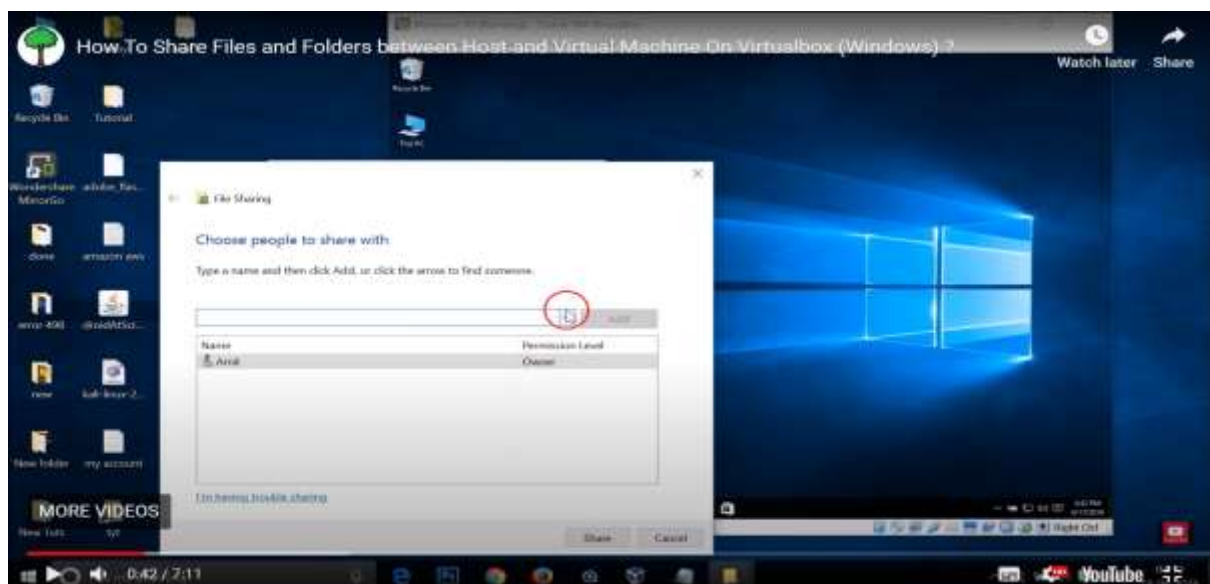

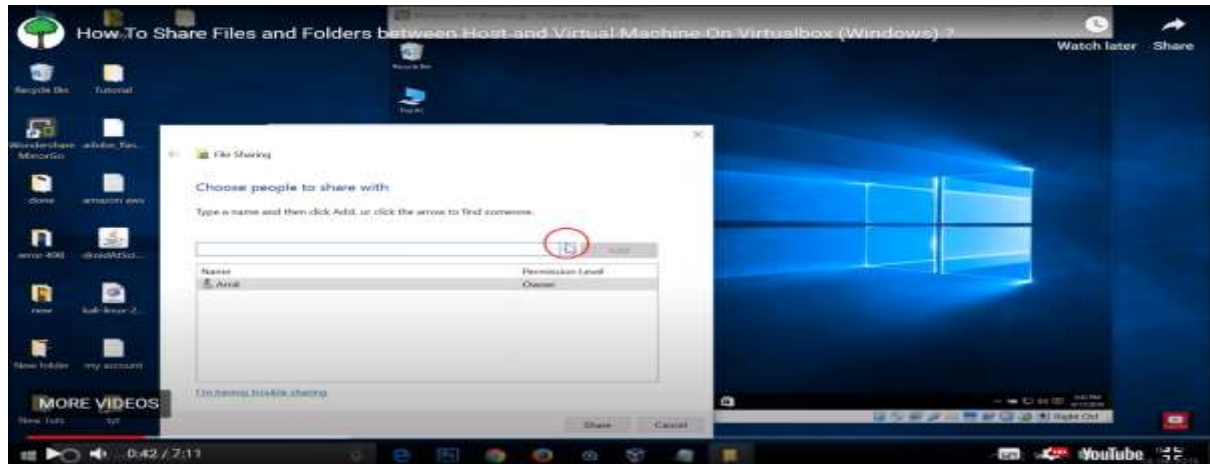

Name it as Shared Folder

Go to Settings of the folder and select sharing

In File Sharing window give access to Everyone to share your folder

Run VM Guest Wizard

OUTPUT:

EX.No:7

Find a procedure to launch virtual machine using trystack

PROCEDURE:

Open TryStack free Virtual machine

Give Network Address in Create Network

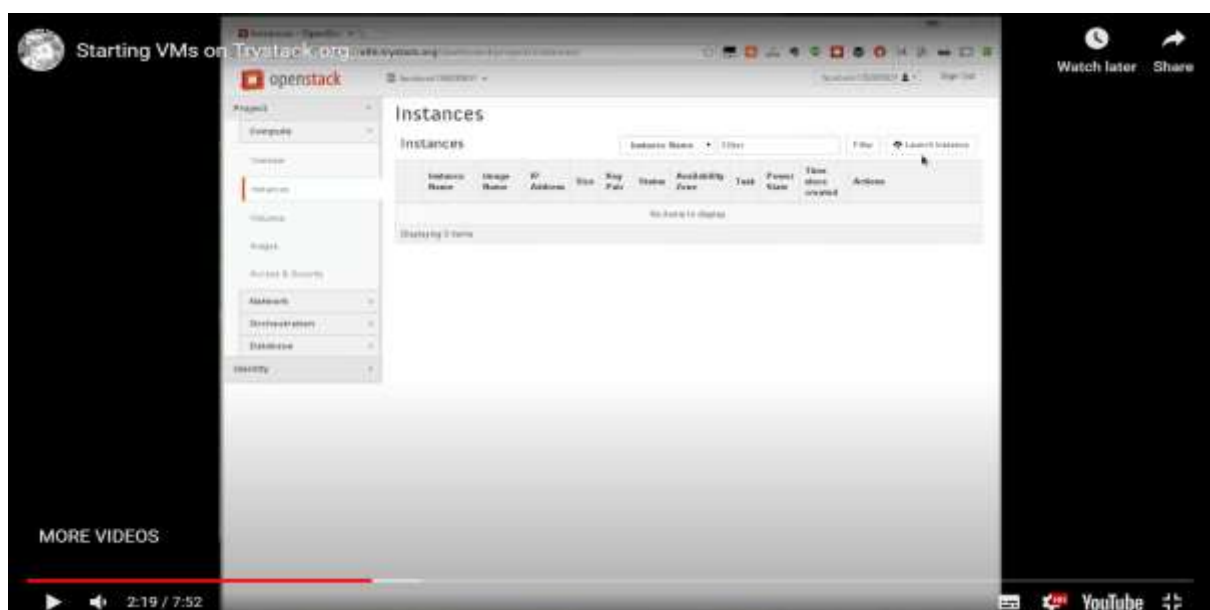

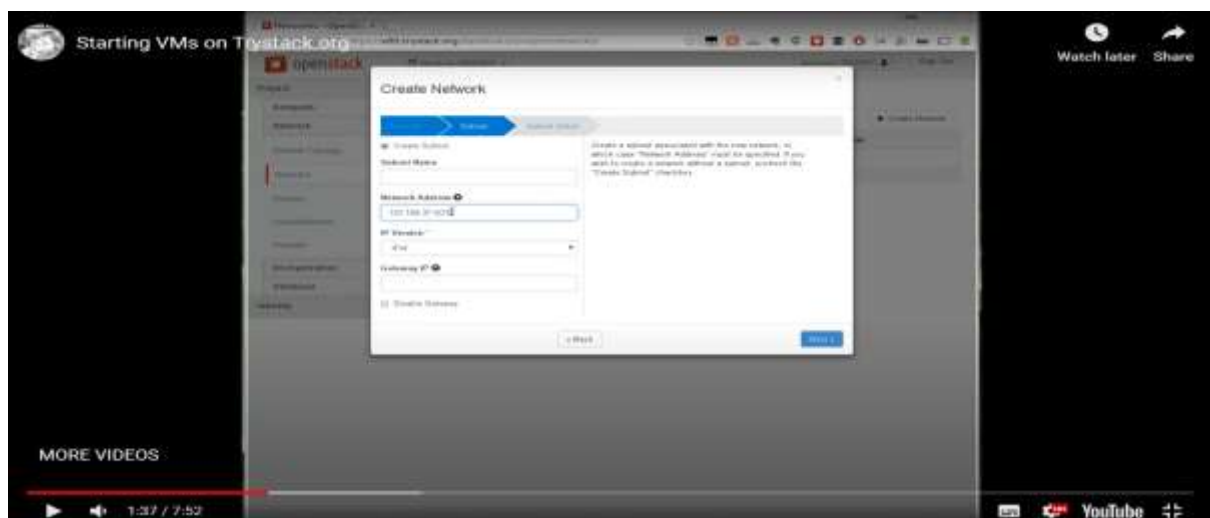

Launch Instances

In Access and Security provide KeyPairName

Create Router

Add the instance in Router and view the network topology

OUTPUT:

Starting VMs on TryStack.org

openstack

Import Key Pair

Key Pair Name:

Public Key:

Description:

Key Pairs are how you login to your instance after it is launched.

Once a key pair is created you will receive and paste your SSH public key into the space provided.

SSH key pairs can be generated with the web-keygen command:

```
ssh-keygen -t rsa -b 4096 -C your_email@example.com
```

This generates a pair of files, a key you have private (private key) and a public key (public key). Paste the contents of the public key file here.

After launching an instance, you login using the private key (the username might be different depending on the image you launched).

```
ssh -i ~/cloud_key -l ubuntu@10.0.0.1
```

Cancel Import Key Pair
